

IDEMIA and SECURE Systems launch innovative biometric access control solution that is the first on the market to meet ANSSI compliance standard

ACCESS CONTROL

POSTED ON 11.04.24

IDEMIA Public Security, the leading provider of secure and trusted biometric-based solutions and SECURE Systems, a VINCI Energies subsidiary, are proud to announce the launch of their joint-developed solution enabling the revolutionary MorphoWave biometric terminal to operate in transparent card reading mode. This pioneering solution is the first on the market to ensure compliance with the French National Cybersecurity Agency (ANSSI)'s standards and recommendations for contactless biometric technology, paving the way for broader deployment of biometric terminals in secure environments.

As a response to rising demand for security and European technological sovereignty, this solution – powered by the Smart Secure Common Protocol (SSCP) from SPAC Alliance – guarantees top-level security while meeting the highest standards for Operators of Vital Importance (OIV) and critical infrastructures both in France and internationally. IDEMIA and SECURE Systems are committed to supporting Europe's push for technological sovereignty by providing a high-security access control solution aligned with local regulations. This breakthrough fulfills the increasing demand from customers seeking ever-greater security measures. Following this success, both partners will continue to explore new applications and market opportunities for this groundbreaking technology.

SECURE Systems & Services is a subsidiary of VINCI Energies specializing in secure physical and digital solutions. Committed to making the world safer, SECURE serves the unique needs of Operators of Vital Importance (OIV), government sites, and critical infrastructures in France and abroad.
