# 《I》 IDEMIA

# IDEMIA launches industry's first fully GSMA-certified SGP.32 eSIM solution

## IST sets the global standard for secure, scalable, and interoperable IoT connectivity.

# CONNECTIVITY

Empowering industries to scale IoT securely and flexibly, IDEMIA delivers the **first fully certified end-to-end SGP.32 eSIM solution**, cementing its leadership in the global IoT ecosystem.

IDEMIA Secure Transactions (IST) is proud to unveil a major industry breakthrough: the first and only fully **GSMA-certified eSIM IoT solution** compliant with the **SGP.32 standard**. This end-to-end ecosystem, from certified sSIM (eUICC) to remote management platform (eIM), is now live and commercially available, enabling secure, scalable, and seamless global IoT deployments.

Awarded under the GSMA IoT Compliance Scheme, this makes IDEMIA Secure Transactions the first company to have both the eSIM and its associated remote management server certified under the SGP.32 standard. This milestone positions IST ahead of industry competitors and validates its security-first, standards-based approach.

IDEMIA's all-in-one solution empowers mobile operators and enterprises in utilities, automotive, transport, logistics, and more to connect, manage, and secure their IoT assets through a dedicated digital portal. The platform provides personalized services, business-specific analytics, full compliance with global standards, and frees organizations from vendor lock-in through built-in interoperability.

## Why It Matters

- ⟫ Security-first architecture, backed by GSMA certification across hardware and infrastructure
- ⟫ Interoperability by design, eliminating proprietary constraints and enabling multi-vendor ecosystems
- ⟫ Global scalability, enabling fast, flexible deployments aligned to business needs
- ⟫ One trusted partner, offering the only complete SGP.32-certified ecosystem on the market today

Already, over 20 global industry players have selected IDEMIA's SGP.32-certified solution for commercial deployment. More than 40 Proofs of Concept are currently underway in collaboration with leading partners, demonstrating strong market demand and trust in IST's innovation.

As the first to deliver this level of certification to market, IDEMIA Secure Transactions is uniquely positioned to shape the future of intelligent IoT, delivering value far beyond connectivity.

With GSMA recognition and ecosystem-wide visibility, this launch is not just a technical achievement, it's a clear signal that IST is ready to lead the next generation of secure, scalable IoT innovation.

> *Bringing the first fully certified SGP.32 solution to market is a proud milestone for IDEMIA Secure Transactions. It demonstrates what's possible when deep industry expertise is combined with a strong focus on security and scalability. The fact that it is already being adopted by industry leaders confirms that we are on the right path. We are proud of this achievement — and even more excited about what comes next,*

Fabien Jautard, EVP Connectivity Services, IDEMIA Secure Transactions
