

Money20/20 Europe – Interview with Didier Lamouche

The magic combination to shape the future of payments

PAYMENT CONNECTIVITY

POSTED ON 07.08.17

The convergence of our physical and digital, civil and commercial lifestyles has resulted in the proliferation of one of our most valuable assets: our identities. As transactions become more complex, involving not only people but also the connected objects with which they interact, new threats emerge. Knowing who is behind an account, a user name and all the variety of objects used for transactions becomes critical to protect individuals. Recently, Oberthur Technologies (OT) and Safran Identity & Security (Morpho) have joined forces to create a world leader in digital security & identification technologies. Hear from Didier, the CEO of OT-Morpho, how convenience, continuity between the physical and digital world, mission-critical security and the human factor will be the magic combination to shape the future of payments.
