

Safran Identity & Security contributed to successful elections in Ivory Coast in 2016

In 2016, Safran Identity & Security, a global leader in identity and security solutions, was selected by the Ivory Coast's Independent Electoral Commission (IEC) to assist with two very important elections for the country: the constitutional referendum on October 30 and the parliamentary election on December 18. The Ivory Coast once again renewed its trust in Safran Identity & Security, who previously contributed to the successful organization of the 2015 presidential election.

IDENTITY

POSTED ON 02.01.17

Safran Identity & Security contributed to every stage of the electoral process, ranging from the **electoral census** to the voting day itself. The company used its latest **biometric technologies** to ensure deduplication of the electoral lists, meaning that each voter only appeared once on the list and that votes cast on the election day corresponded to their civil identities.

The solution was used to revise the electoral list through **biometric enrollment** of new voters and of those who had changed addresses. This list, featuring over 6.3 million voters, was presented to the IEC before each election. On the day of the election, the solution **electronically authenticated the identity** of voters using their **fingerprints** and photo, and securely transferred the results once the votes had been counted.

For these different missions, Ivory Coast authorities used the company's secure, **biometric MorphoTablet™**, for **enrollment, authentication** on the election day as well as sending voting results. Over the past two years, 30,000 **MorphoTablets** have been delivered to the Ivory Coast.

Safran Identity & Security also provided training, technical assistance as well as logistics and maintenance support throughout each electoral process.

We are proud to have assisted once again the Ivory Coast during its elections. Our expertise and experience in this area allow us to respond to the national authorities' requirements in a very short time and provide a comprehensive and operational solution. In this way, we can directly contribute to a democratic national voting process in this country.

Anne Bouverot, Chair and CEO of Safran Identity & Security

OT-Morpho - is now IDEMIA, the global leader in trusted identities for an increasingly digital world, with the ambition to empower citizens and consumers alike to interact, pay, connect, travel and vote in ways that are now possible in a connected environment.

Securing our identity has become mission critical in the world we live in today. By standing for Augmented Identity, we reinvent the way we think, produce, use and protect this asset, whether for individuals or for objects. We ensure privacy and trust as well as guarantee secure, authenticated and verifiable transactions for international clients from Financial, Telecom, Identity, Security and IoT sectors.

With close to €3bn in revenues, IDEMIA is the result of the merger between OT (Oberthur Technologies) and Safran Identity & Security (Morpho). This new company counts 14,000 employees of more than 80 nationalities and serves clients in 180 countries.
