

IDEMIA Excels in Department of Homeland Security Biometric Technology Rally with OneLook Face/Iris System

Multimodal Solution for High-Volume Travel Scenarios Earns Top-Tier Results in User Satisfaction, Capture and Matching Capabilities, and Throughput

TRAVEL

POSTED ON 09.10.18

IDEMIA, the global leader in Augmented Identity, today announced that its contactless **OneLook™** device for rapid capture, matching and processing of face and iris biometrics, earned top scores in all three performance categories in the 2018 Biometric Technology Rally, hosted by the Department of Homeland Security (DHS) Science and Technology Directorate (S&T). Biometric Capture and Identification systems from participating organizations were tested for user satisfaction, effectiveness (capture capability and matching capability) and efficiency (throughput). OneLook was the only face/iris system that scored among the top three systems tested at the rally.

OneLook offers a new approach to capture and identification through a single, easy-to-use, at-a-distance biometric capture device that provides rapid capture, matching and processing. Requiring little involvement from users, OneLook can be integrated into an existing customer touchpoint, such as a self-service kiosk, or provided as a turnkey solution for integration into a gate or counter.

S&T's first Biometric Technology Rally, held in March 2018, with results published in late July, used a standard security checkpoint process, which require speed and reliability, to test the ability of biometric identity systems to acquire and match images from a diverse volunteer population within a realistic time constraint.

Six of the eleven companies that participated entered unimodal biometric face-only systems. IDEMIA was among the five companies that competed with a multimodal biometric face/iris system to provide an enhanced level of authentication – more effectively addressing the need for accurate identification in high-security environments. Among the results:

→ User Satisfaction

- OneLook achieved the highest user satisfaction rating among face/iris stations with a 93% score
- One Look ranked in the top three among all eleven companies – demonstrating the simplicity of use for this multimodal system

→ Effectiveness

- OneLook was the only face/iris system that met the rally threshold of obtaining a less than 5% “failed to acquire face images” (face FtAR) metric within 20 seconds
- OneLook achieved the highest score among face/iris systems for the true identification rate of iris images (iris mTIR) within both 5 and 20 second testing scenarios

→ Efficiency

- > Among face/iris stations, OneLook registered the second best score with a transaction processing time under nine seconds.

The outstanding performance of OneLook at the Biometric Technology Rally continues IDEMIA's over four decades of leadership in the industry and is a testament to developing the best available solutions for public security, civil identity and border control challenges. OneLook now joins our long string of successes in product competitions as the ideal multimodal biometric solution for high-volume identification use cases in which accuracy, speed and reliability are required.

Donnie Scott, Senior Vice President, Public Security for North America at IDEMIA

A demonstration of the **OneLook** solution, which is currently available, will be featured at the Future Travel Experience (FTE Global) in Las Vegas September 10-12, 2018 at booth E33 or learn more at OneLook.

About IDEMIA - OT-Morpho is now IDEMIA, the global leader in Augmented Identity for an increasingly digital world, with the ambition to empower citizens and consumers alike to interact, pay, connect, travel and vote in ways that are now possible in a connected environment.

Identity, we reinvent the way we think, produce, use and protect this asset, whether for individuals or for objects. We ensure privacy and trust as well as guarantee secure, authenticated and verifiable transactions for international clients from Financial, Telecom, Identity, Public Security and IoT sectors.

OT (Oberthur Technologies) and Safran Identity & Security (Morpho) joined forces to form IDEMIA. With close to \$3 billion in revenues and 14,000 employees around the world, IDEMIA serves clients in 180 countries.
