Singapore's Smart Nation vision, its status as a leading innovation and financial hub, and gateway to the rest of Asia Pacific made the city-state an attractive location for **IDEMIA** to establish its **regional headquarters**.

Located at 21 Media Circle, the headquarters also incorporates an **Innovation Centre** highlighting the Group's commitment to the region while reinforcing **IDEMIA's** vision of securing identities with convenience in this digital transformation era.

The **advanced technologies in identity security** to support partners and customers on their digital transformation journey, offering seamless experiences with next-generation technologies without compromising security. Featured solutions include an automated air passenger boarding process, advanced mobility solutions, IoT innovation, video analytics, mobile payments and a new generation biometric and display payment card.

IDEMIA in Singapore

IDEMIA's border control technologies are currently deployed in Terminal 4 of Singapore's state-of-the-art **Changi International Airport**. The fully automated departure process at Terminal 4 combines the best of biometric accuracy, design efficiency and program execution, based on IDEMIA's expertise in biometrics, border control and system integration.

The solutions include:

- **Biometric capture of passengers** to facilitate automated bag drop, immigration and boarding
- **Automated immigration and boarding gates**
- **Passenger process facilitation platform**, linking various airport and airlines systems

To date, more than 6 million passengers have passed through **IDEMIA**-powered gantries at Terminal 4.

We are delighted to strengthen our presence in Singapore as it's an ideal backdrop for building the future of digital security in APAC. As identity theft is the most common type of cybercrime that transcends borders, it is critical for governments, airports and border controls to bolster national security whenever and wherever security matters. Our next-generation and innovative solutions enable nations and enforcement agencies to substantially improve security capabilities in today's connected environment, while ensuring convenience and seamless processing of citizens' identities.

Didier Lamouche, Chief Executive Officer, IDEMIA

I am delighted that IDEMIA has chosen Singapore to establish its headquarters and innovation centre, as Singapore is in the forefront of introducing new initiatives to steer innovation and digitalisation. As identity security is of paramount importance in today's digital age, IDEMIA is in good stead to boost national and citizen security in Singapore and the region. This announcement is also timely as 2018 has been declared the France-Singapore Year of Innovation which recently led to the signing of a joint roadmap for deepening cooperation in digital innovation, internet governance and cybersecurity during Prime Minister Lee Hsien Loong's visit to Paris in July 2018. Singapore and France share a synergy in enhancing our innovation ecosystem, and as more French companies continue to establish its presence in Singapore, I am confident that the collaborations between both countries will deepen, to create more opportunities for enterprises and consumers.

His Excellency Mr Marc Abensour, Ambassador of France to Singapore

IDEMIA's entry into the **Asia-Pacific** makes an exciting period for the group. Today a leading player in the identification and authentication sector, the group has four R&D centres in Asia Pacific and serves clients in over 20 countries within the region.

With governments and organisations accelerating their pace of digital transformation across Asia, **IDEMIA's APAC headquarters** will power the group's geographical footprint within the region.

About IDEMIA- OT-Morpho is now IDEMIA, the global leader in Augmented Identity for an increasingly digital world, with the ambition to empower citizens and consumers alike to interact, pay, connect, travel and vote in ways that are now possible in a connected environment.

Securing our identity has become mission critical in the world we live in today. By standing for Augmented Identity, we reinvent the way we think, produce, use and protect this asset, whether for individuals or for objects. We ensure privacy and trust as well as guarantee secure, authenticated and verifiable transactions for international clients from Financial, Telecom, Identity, Public Security and IoT sectors.

OT (Oberthur Technologies) and Safran Identity & Security (Morpho) have joined forces to form IDEMIA. With close to \$3 billion in revenues and 14,000 employees around the world, IDEMIA serves clients in 180 countries.
