POSTED ON 06/02/16

The Internet of Things (IoT) is moving quickly, and interoperability and cooperation are absolutely crucial to its success. That's why the claim chosen for this year's Sierra Wireless Innovation Summit is "Let's build i(o)t." The event starts with a plenary session featuring a keynote by Anne Bouverot, Chair and CEO of Safran Identity & Security, talking about "Security in IoT" from 11:00 – 11:20. The afternoon focuses on presentations of future IoT technologies, followed by business sessions with case studies and panel discussions. Partners and customers of Sierra Wireless will show live demos, present real use cases, and make announcements.

The agenda gives enough time for networking and seeing demos, enabling business and technical attendees to exchange, learn, and build the future of IoT. The Safran Identity & Security team will present live demos of its eSIMs and remote SIM provisioning solution, MorphoFlex™. Please click here to discover more about Safran's advanced IoT solutions.
