

We are looking for...

Research & Development Project Management

Innovation engineer

- › Develop mobile app-based demos: POC, innovation lab.
- › Support implementation of some key innovations during startup phase.
- › Support pre-sales team to find ambitious solutions.

Artificial intelligence/ data science engineer

- › Develop algorithms with Machine Learning / Deep Learning.
- › Identify data uses in regions for potential customer services.
- › Develop a Machine Learning Hub for general applications (ie not biometric technology and "cold" tech in general).

Security engineer

- › Assess IDEMIA systems anti-hacking security.
- › Develop security countermeasures for IDEMIA technology.
- › Perform tests hacking into IDEMIA products to assess competitor security.

Cloud engineer

- › Develop Cloud-based apps or systems.
- › Support operations to convert current in-house systems to Cloud.

Software developer

- › Code and test software as per contracts and product requirements based on IDEMIA departmental coding standards.
- › Participate in software design and reviews.
- › Report risks / issues as soon as they are discovered.
- › Solve problems with optimum solutions based on IDEMIA recommendations and best practices.
- › Meet software delivery dates as necessary.
- › Document software, installation guidelines and user manuals.

Mentoring

- › You will be assigned a ONE buddy under the same graduate career path so as to share work experiences and best practice.
- › You will be assigned with your ONE buddy a ONE mentor who will support you throughout your two-year program and will help you build a network of company contacts..
