

MOVE

Public
Security & Identity

Combining a mobile and a countertop lottery & betting terminal into a single solution

MOVE is the first hybrid camera-based lottery terminal that offers the services of a fully-fledged countertop device managing play slip reading efficiently. This terminal is also for mobile point of sale usage in its tablet configuration.

Compact and mobile camera-based lottery terminal

With a footprint smaller than DIN A4 (21x29,7 cm), MOVE can be associated with peripherals such as a printer and a customer display unit to offer

all the features for a fully-fledged countertop device, managing play slips, receipts and instant tickets as well as ID documents efficiently with its camera-based reader.

When removed from its holder and associated to a portable printer, the tablet is perfect for placing bets in

varied environments (arenas, event locations, live-betting bars etc.) and for making pre-betting selections in long queues during rush hours.

MorphoTablet 2

- › Qualcomm® Snapdragon™ 410, Quad Core 1.2GHz
- › 8" WXGA (1280x800) color touch screen (toughened glass, capacitive technology, multi-touch)
