

DIGITAL TRAVEL CREDENTIAL

With the Digital Travel Credential (DTC), seamless travel will be taken one step further. Travelers will be able to securely digitalize their passport and store it in their smartphone for a safer and more convenient travel experience. With our suite of solutions that are designed to maintain privacy, IDEMIA is perfectly positioned to support all stakeholders in implementing this innovation.

Security at the heart of the process

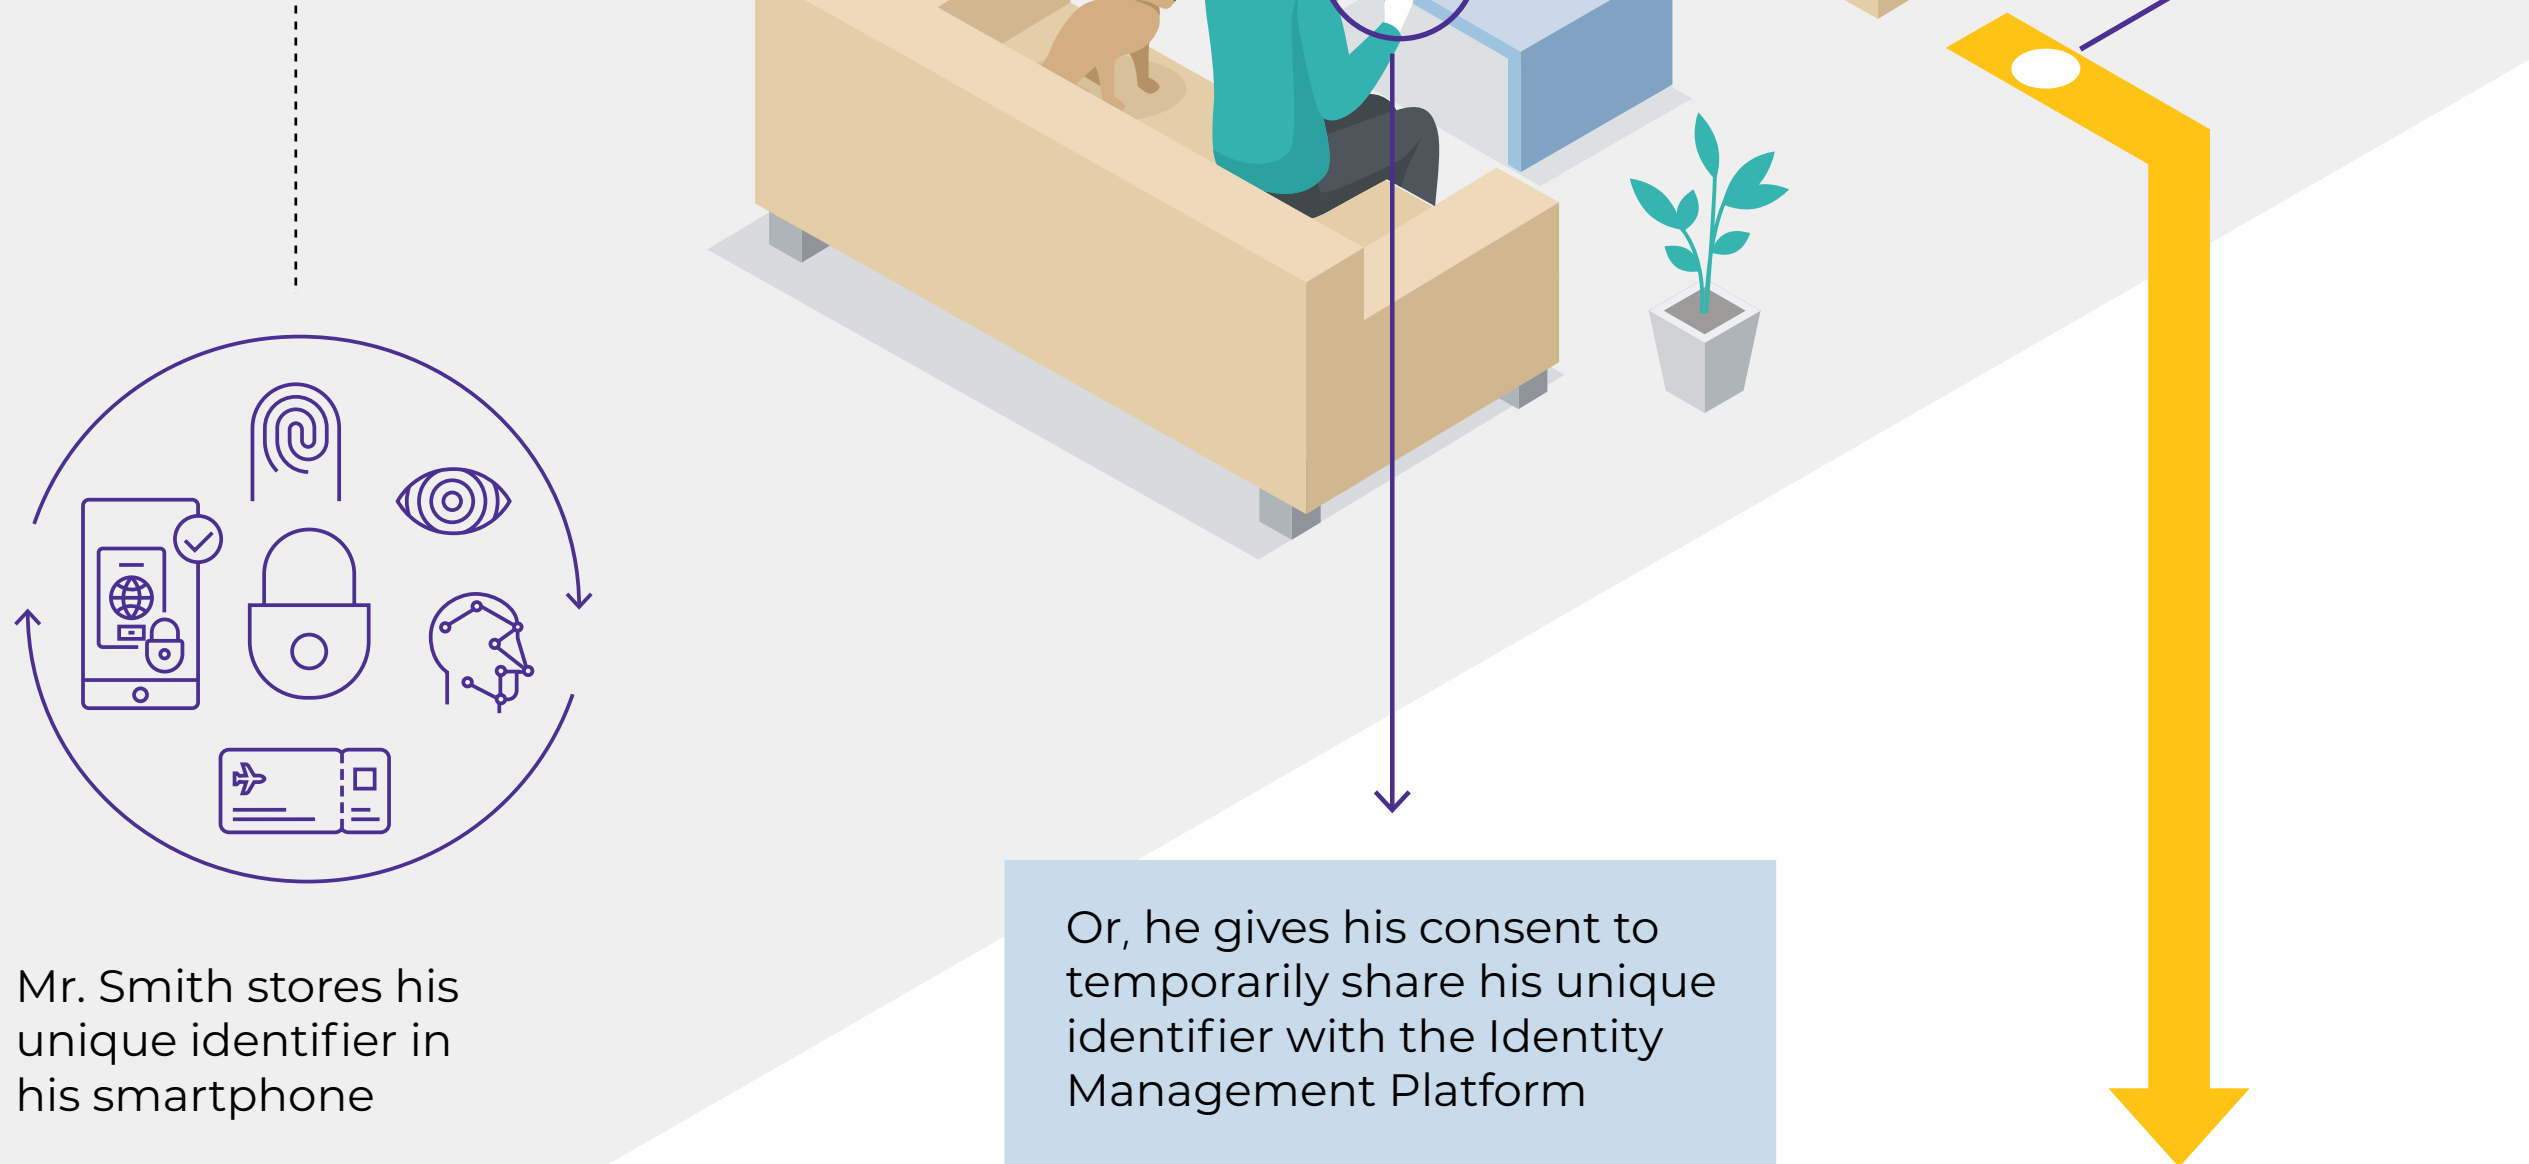

Three authentication factors can be combined for secure and reliable DTC creation:

- 1 What the traveler is: their biometrics
- 2 What the traveler has: their smartphone
- 3 What only the traveler knows: their PIN code

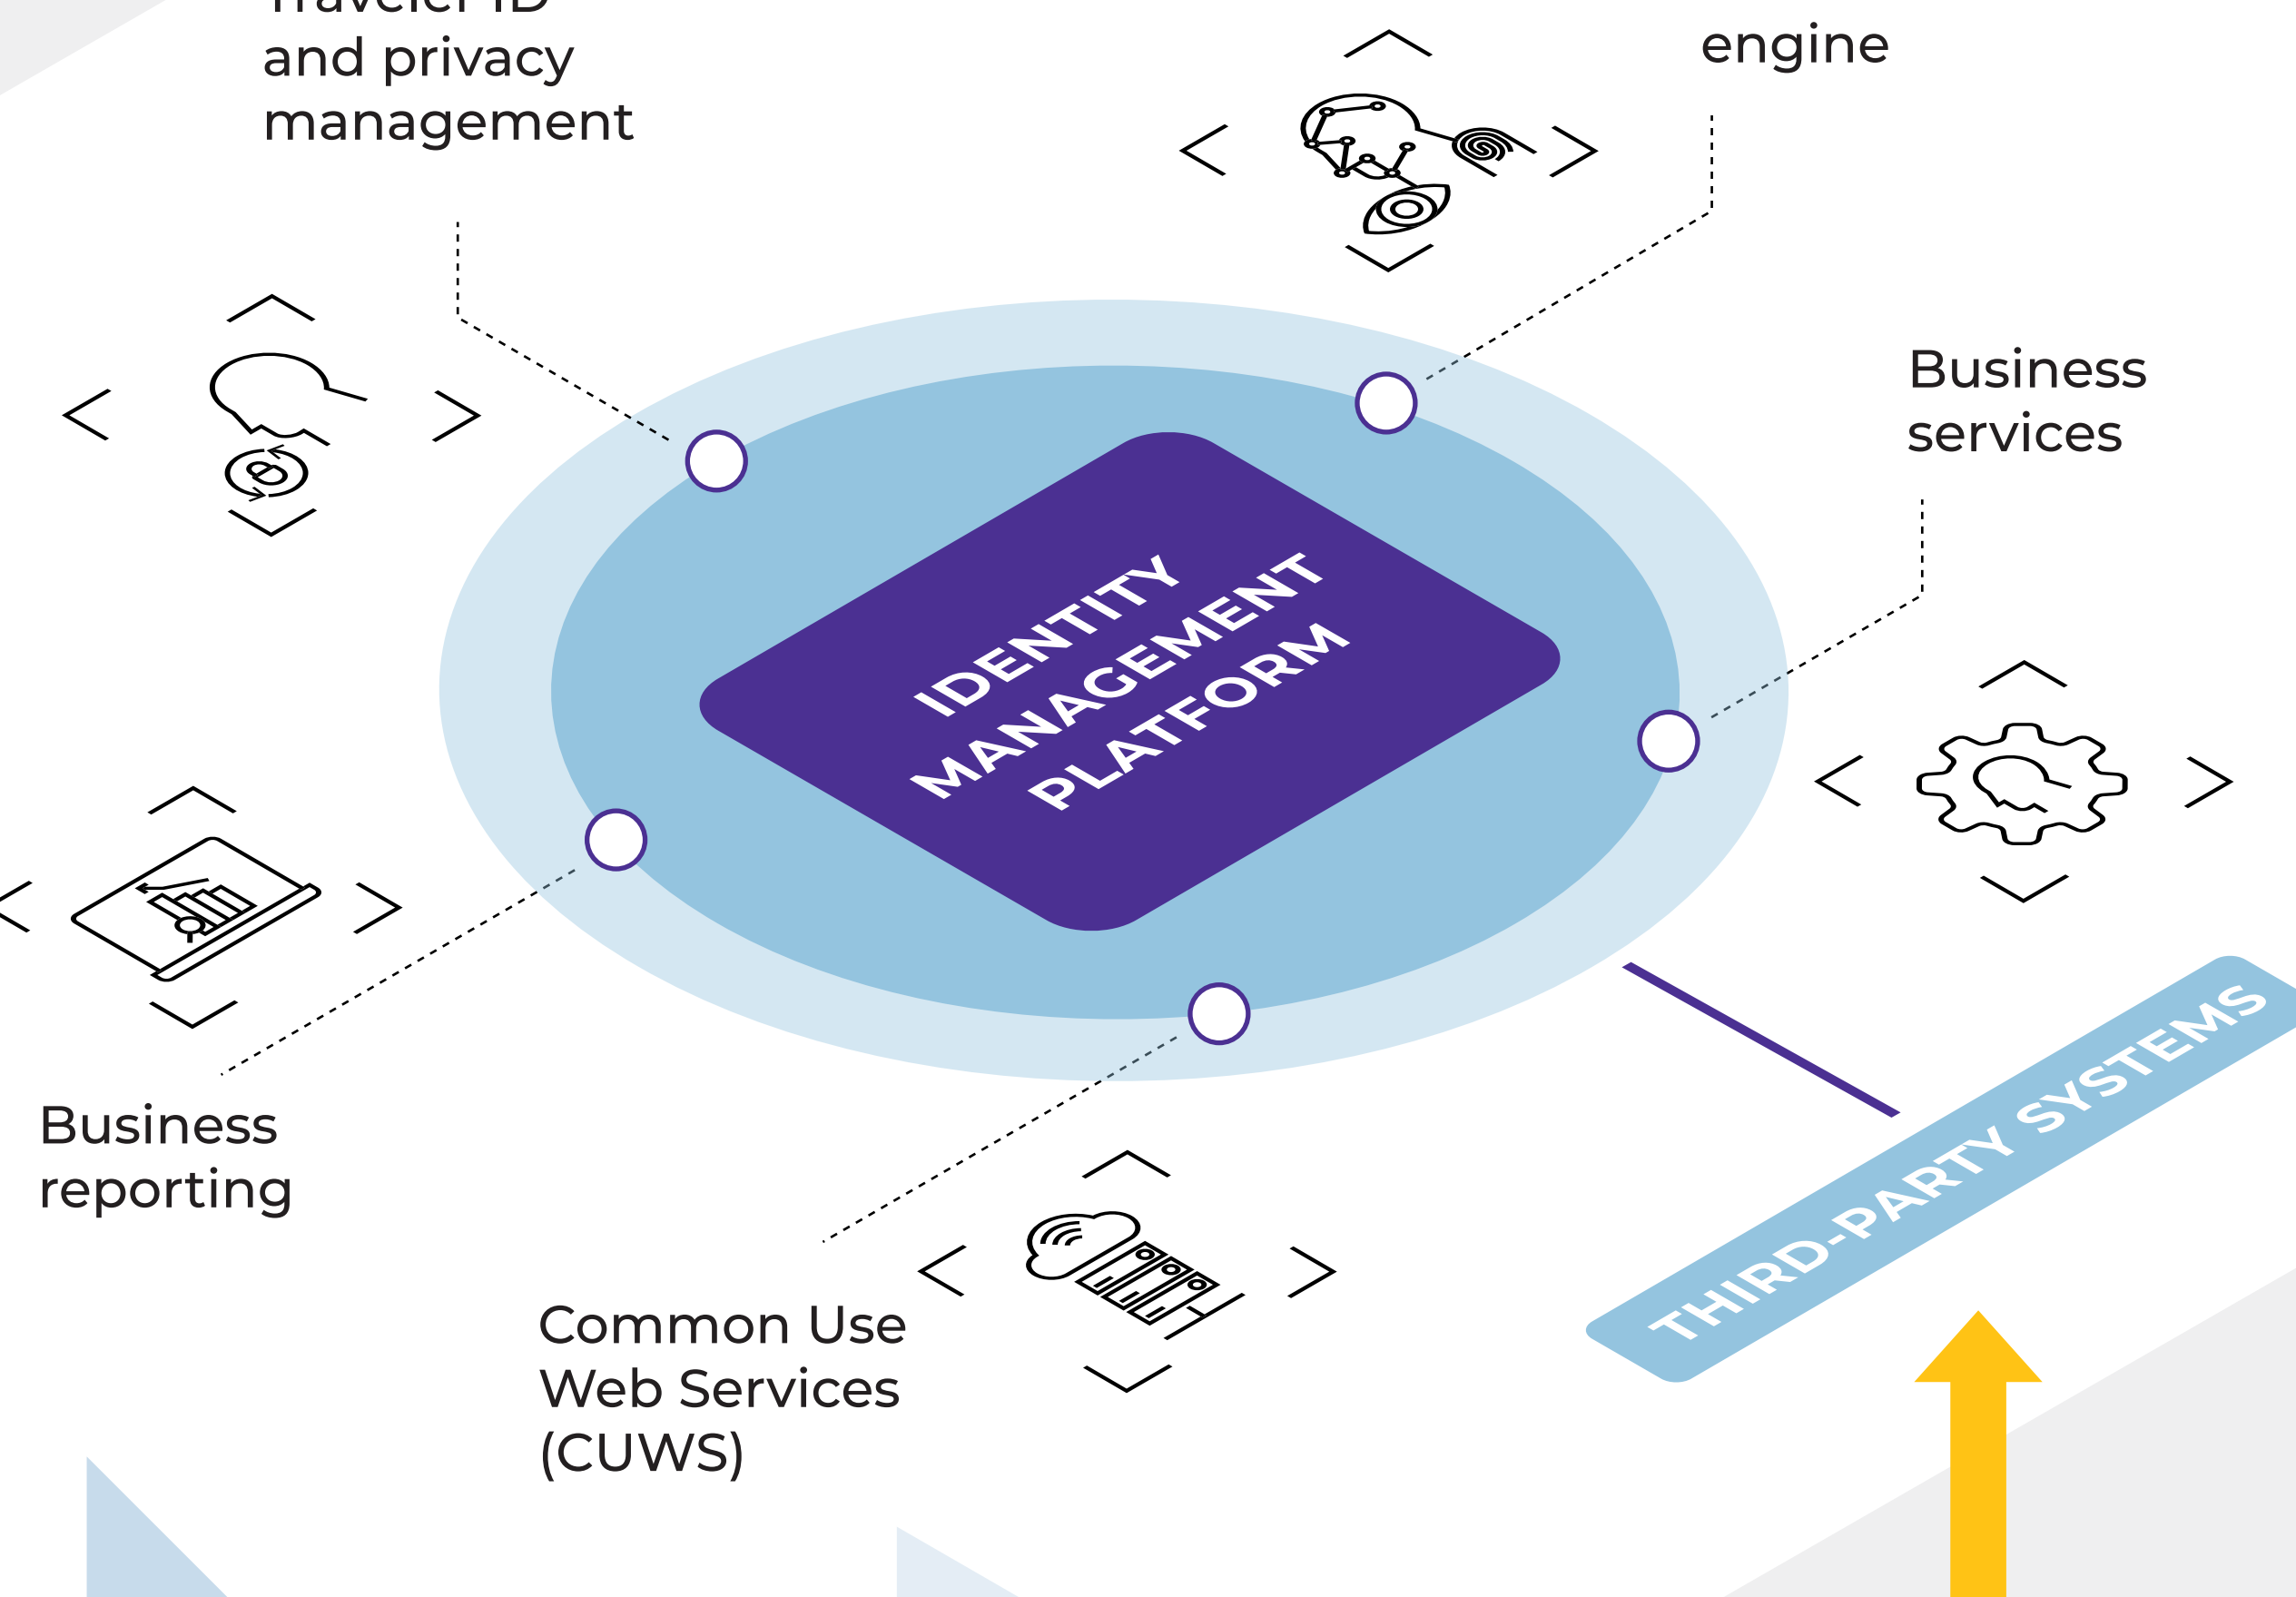

2 Travel with your DTC at all times

No more physical passport to scan! Mr. Smith can now share his DTC easily, and enjoy a more secure and seamless travel experience, while his privacy is maintained.

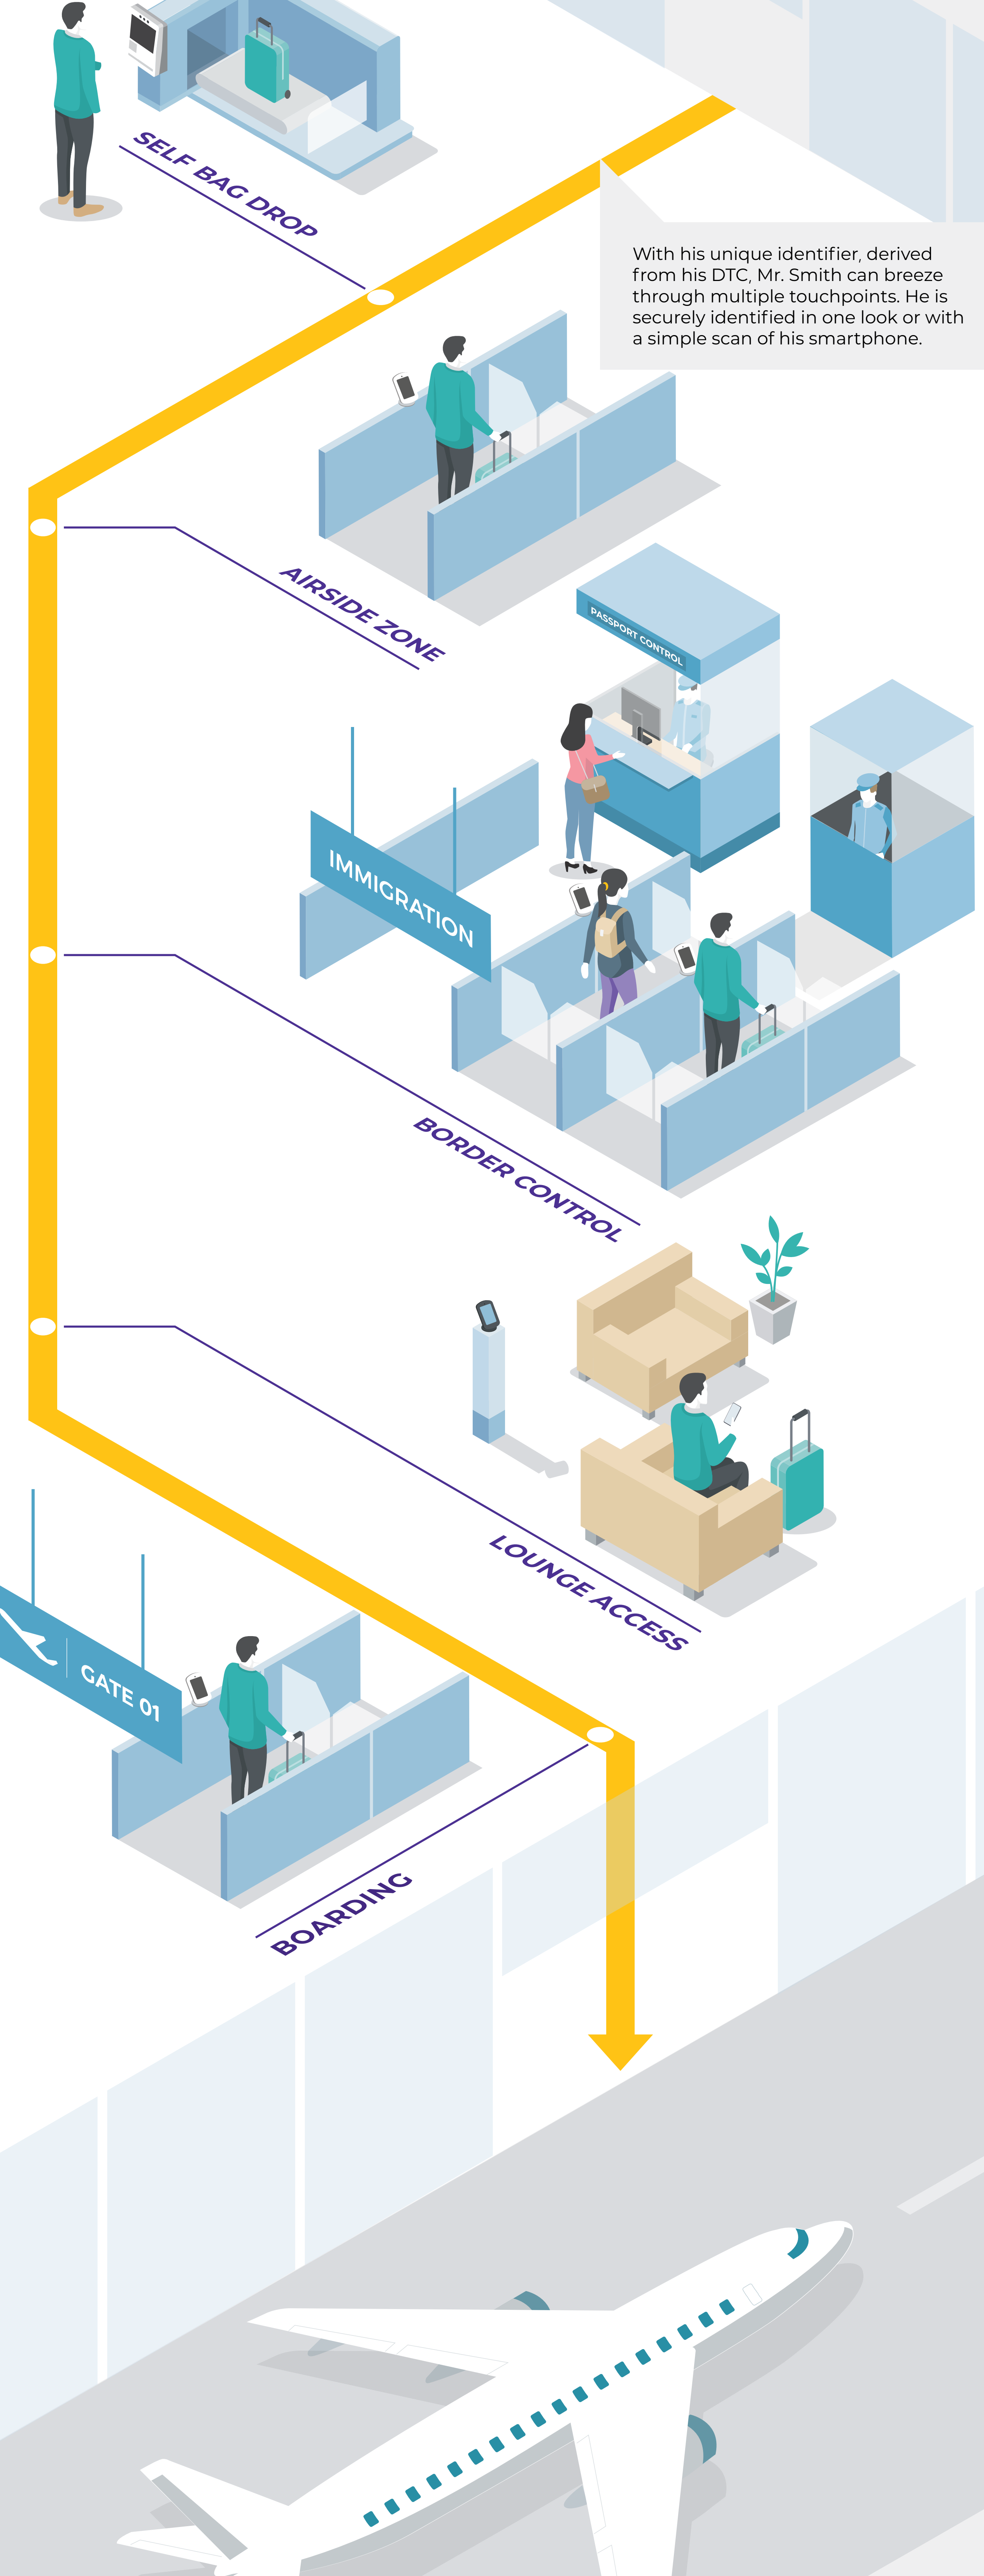

Mr. Smith stores his unique identifier in his smartphone

Or, he gives his consent to temporarily share his unique identifier with the Identity Management Platform

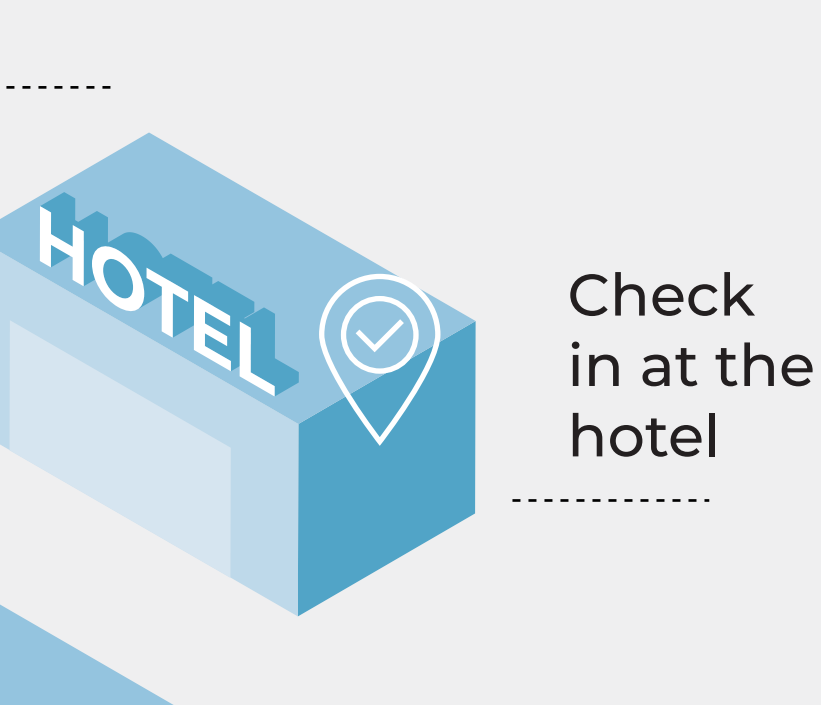

The Identity Management Platform securely exchanges Mr. Smith's data with all touchpoints. In full compliance with international privacy regulations, the platform erases Mr. Smith's data as soon as he boards the plane.

With his unique identifier, derived from his DTC, Mr. Smith can breeze through multiple touchpoints. He is securely identified in one look or with a simple scan of his smartphone.

3 Enjoy other services thanks to your highly secure identity

KEY BENEFITS

- Higher security
- Designed for privacy
- Fully paperless experience
- Passenger centric
